

VIATEC: Vehicle Activated Signs

Overview

Viatecs ranges of Vehicle Activated Signs (VAS) are Highways Agency approved and offer exceptional durability and performance at a cost effective price. The slim signs are power-efficient, reliable, lightweight and practically maintenance free. From speed camera, school entrance warnings and speed restriction warnings, all signs use a high intensity traffic-grade LED.

The secure mounting facility includes a quick release mechanism and allows for simple installation and relocation of all signs. Compliance with TSRGD 2002 enables installation of each sign without the need for site authorisation. Our extensive range includes single and multiple LED signs and /or static retro-reflective aspect options.

Speed Roundels

The speed roundel VAS range have three roundel speeds programmed into the sign face (20, 30 or 40) and are set at the necessary speed and can be 'unlocked' to alter that speed at a later date. Proven to be very effective in reducing speeds, decreasing accident risk and occurrence.

Activation of the speed restriction signs is via the variable Microwave Vehicle Detector (MVD) which can be configured according to the local site and is available as an integrated or external unit. For those that are monitoring traffic flow, an event logging facility with instant data retrieval is available.

Further benefits

Environmental standards: UK-designed, manufactured and supported and conform to environmental RoHS and WEEE directives

Fully approved: HA approved to TR2516 and European BSEB 12966-1:2005 standards (HA Type Approval Ref: AP21704)

Highly visible and legible: LED features 5-stage automatic dimming and louvre shielding to ensure maximum visibility even in bright sunlight

Low maintenance: Vandal resistant design
