VIAFIX: 24Seven

Easy Working Cold Asphalt for Permanent Repairs in All Situations

Produced on site or in the depot for transporting to multiple locations, **Viafix** will lay and compact easily in freezing conditions, it even cures underwater. Low void cores will extract the following day.

Viafix is HAPAS approved and suitable for permanent repairs on all classes of carriageway.

Viafix is environmentally friendly and not subject to COSHH.

Full independent performance information available on request.

Step one: Pour bags in a stationary electric or mobile diesel **Viamixer**, this material is pre-coated and bagged at the Viatec plant (Part A). Un-catalysed bagged material has an endless shelf life. Standard grades are 0/3mm, 0/6mm and 0/10mm but any asphalt grades can be produced.

Step two: Add the liquid catalyst (Part B) and mix for approximately 3 minutes. Correct mixing is easy, the ratio of Part A to Part B is fixed at 4:1 or 4 bags to 1 bucket.

Step three: Open the exit chute to receive the material. This is the final water activated product and should be protected from moisture/water if the **Viafix** is not required for immediate use.

Viafix; Either made from using the **24Seven** system or pre-made and packaged at the Viatec plant, is extremely high performance and has the ability to be cored for analysis the following day. Full and independent Material Laboratory analysis is available on request.
